

SUCCESSFUL LAUNCH FOR CLIENT EXTRANET - THE DE DATA WIKI

14 June 2007 – Software solutions provider De Data recently launched its own extranet site, the De Data Wiki, at its Sydney Purveyance User Conference held on 08 June 2007.

This Wiki is a repository of information for De Data and our clients. It provides the user community with the ability to communicate amongst the group and the De Data team as well as obtain relevant and useful information to their business processes.

In its simplest form, the Wiki allows De Data users to freely create and edit the page content using any Web browser. The extranet site supports hyperlinks and has a simple text syntax for creating new pages and crosslinks between internal pages.

Like other Wikis, the "open editing" allows users to create and edit pages and is exciting in that it encourages democratic use of the portal and promotes content composition by our non-technical users.

The De Data Wiki has two main areas – “De Data Content”, which is an area maintained by De Data staff for the benefit of our clients; and “User Content” which is maintained by the De Data end user community.

Frank De Palo, founder and managing director of De Data, said “The Wiki has been provided in response to the Purveyance community requests for such an online forum. We believe that the Wiki will better server our clients as it allows them to have a greater participation with the direction and development of our systems.”

The site was extremely well received at the User Conference with several attendees already armed with ideas that they wished to share with the user community for comment.

Elaborating, Frank De Palo said, “The De Data Wiki is just another example of the value-add service and support De Data provides to its Clients.”

About De Data

De Data is a privately owned company that has successfully delivered quality Information Technology (IT) services to organisations locally, nationally and globally since 1993. The company shareholders collectively enjoy over 40 years industry experience and are actively involved in the day-to-day running of the business. The goal of De Data is to provide clients with independent practical solutions to business challenges. It is the aim of De Data to allow the client to focus on their core business so they are not forced into the business of being technical specialists.
