

PURVEYANCE USER CONFERENCE

MELBOURNE – MAY 26TH 2009

The annual Purveyance User conference was held on the 26th May in Melbourne this year. This event was anticipated to be educational and beneficial for our clients through delivering valuable and the latest information on the Purveyance Software. Judging by the positive feedback received we can say that it was a successful event and will remain to be an annual occasion that we will continue to provide for our clients.

This year's conference covered several topics of interest relating to the Purveyance software, information that we hope our clients will gain value from. Some of the topics covered included; how to use Manual Ranging – A new feature in Purveyance, in depth training on the Distribution module and all the latest enhancements that the latest version of Purveyance has to offer.

Our guest speaker at this years' conference was Scott Birley from Coalface Consulting. The insightful contents of Scott's presentation, "Improving Company and Individuals Performance by Measuring What Matters" combined with his captivating deliverance grasped the attention amongst the delegates and was proven to be a hit.

The conference was followed by the 'User Group Forum'. This session was purely driven by the Purveyance user community, it was a great opportunity that allowed users from different business to come together and have the chance to exchange information and share discussions. The user group demonstrated to be a winner as the participants really took advantage of this forum by submitting extensive input, raising questions and expressing opinions on various discussions.

Overall the 2009 Purveyance User Conference confirmed to be a successful event that delivered valuable information on the Purveyance software. The information presented was well received by all the delegates with one attendee even commenting on the 'unexpected level of interaction and involvement' from the audience.

DeData

Carrying on the demand and success of this event, we will without doubt embark on working towards hosting another Purveyance User Conference in 2010.
